

UPLIGHTERS

Wedge Uplighters

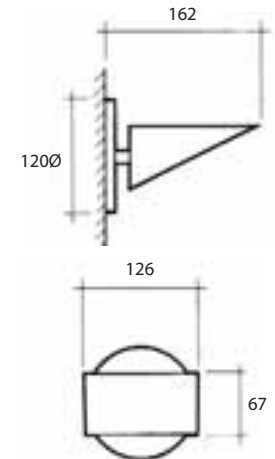

Diffused • Glare Free • Discrete • Minimal Design

The 10230, 10231 and 10232 are wedge shaped, wall mounted uplighters for linear tungsten halogen and metal halide lamps, with simple clean lines and constructed of die-cast aluminium. The wash of light above them is symmetrical about the vertical axis. They can all be used as ceiling mounted wall washers to illuminate artwork etc.

10230

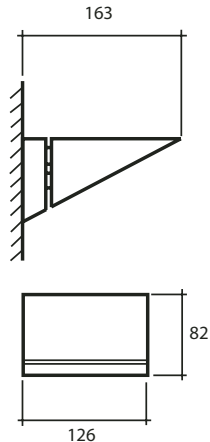

The wedge can rotate on the circular backplate 175° either side of vertical.

UPLIGHTERS

10231

Using the same reflector assembly as the 10230, the 10231 has a fixed wall mounting box, which is continues the profile of the main body and a conceals a BESA standard fixing plate.

Finish Options for 10230, 10231 and 10232

Powder coated white / black / RAL 9006

Lamp Options for 10230 and 10231 – Mains Voltage double ended R7s Halogen lamp

Power	Output	Lamp Life
100W	1600lm	2000hrs
150W	2400lm	2000hrs

10232

The latest miniature discharge lamp technology has been used in this uplighter. The 35W Metal Halide lamp has a 3000°K colour temperature and an output of 3300 lumens. At 94 lm per Watt this has remarkable efficiency - even better than fluorescent. Colour rendition and output is equivalent to the 150W Halogen but with 8000 hour lamp life, and with 75% energy use reduction. This technology is not currently dimmable and has a "start-up" of about 2 minutes which means that it comes to it's own in a hallway or atrium where it is switched on for long periods.

Supplied complete with pre-wired remote HF control gear with 5.0m lead. (the maximum distance of cable to lamp)
